## INFRARED WAXING TECHNOLOGY FOR HIGHEST DEMANDS

This racing-tested waxing method was developed especially for better long-term gliding properties.

In this special procedure, a dual infrared heater is used to provide even, contact-free heating of the base material and the manually applied wax and to work its way into the base material with further selectable heating runs.

The MONTANA RACE WAXER with Thermocontrol permits up to 90 percent wax savings in comparison with conventional race waxing, and even eliminates some of the work.

With the compact MONTANA RACE WAXER MOBILE infrared wax technology is available location independent, so the machine can for example be carried to the competition site.

### Advantages of Thermocontrol:

- No coating damage due to overheating
- Temperature preset, adjusted to the wax being used
- Compensates paint-related temperature differences
- Controlled long-term waxing

| TECHNICAL DATA                             | RACE WAXER             | RACE WAXER MOBILE |
|--|------------------------|-------------------|
| Power:                                     | 3,2 kW                 |                   |
| Voltage:                                   | 230 volt / 50/60 Hz    |                   |
| Fuse:                                      | 16 A                   |                   |
| Weight of running rail:                    | 23,5 kg                | –                 |
| Weight of stand:                           | 30,2 kg                | –                 |
| Weight of rail and stand:                  | –                      | 21 kg             |
| Weight with 1 lamp:                        | 8,2 kg                 |                   |
| Weight with 2 lamps:                       | 9,2 kg                 |                   |
| Weight of MOBILE transport case:           | –                      | 40 kg             |
| Length x depth x height (including frame): | 2.500 x 744 x 1.240 mm |                   |
| Length x height (running rail):            | 2.500 x 210 mm         |                   |

### ADVANTAGES

- Careful waxing for highest standards
- Even wax absorption with deep action
- Better and longer lasting gliding characteristics
- Processing of all conventional wax types
- Heating power definable by selecting one or two IR lamps
- Precise definition of the heated section by quick magnet marking
- The standard model of the RACE WAXER is for wall mounting
